

The Winton Global Homes Difference Engineered Floor Trusses

Winton packages give you a choice between 2x10, I-joists and our own “Webbed” or Engineered Floor Trusses .

Why use Engineered Floor Trusses?

Webbed floor trusses make it easy to run heating ducts, plumbing and electrical components of your home. Trades are able to complete their job in a timely manner and can move to the next job in a shorter time frame. Plus you will enjoy a higher ceiling in your basement.

What is the cost difference?

An Engineered Floor Truss is cost comparable to I- Joists. The time savings from not having to knock out the holes of I-joists to run wiring through a small hole and suspend heating ducts and plumbing is a definite benefit in this labor pressed market where trades time is very valuable and their happiness with the ease of the job is at its ultimate high.
